An Inventory management program is about eliminating sku's, providing technical insight, and keeping your stock room running efficiently.

How do you know if you are in need of an Inventory Management Program? Some questions you may ask yourself are:

1. Do you need to be more efficient?
2. Do you need a guarantee that your storeroom is fully stocked at all times?
3. Do you want control of your inventory and spending?
4. Do you need to remain technically advanced?

If you answered yes to any of these questions, then our Inventory Management Program may be just what you need. The program offers:

1. Preliminary analysis of your inventory
2. Compiled database of all parts
3. Detailed breakdown by part number, which shows items that are redundant or obsolete
4. Suggested stock levels based on usage
5. Standardization on all bin locations
6. Dedicated Inventory Specialist that will maintain your storeroom to your specifications
7. Customized purchase order and invoicing scheme
8. Quarterly review meetings to discuss any outstanding issues
9. Partnering relationship that works to reduce and measure Total Cost of Ownership

Successes

We conducted a Cooper Bussmann low-peak fuse conversion that allowed us to reduce the number of SKU's at a facility by 25%, while at the same time updating the facility to a higher level of protection.

We replaced existing 400 watt metal halide lamps with Sylvania MS360 energy saving lamps (360 watt version) without loss of lumen output and created an energy savings of \$13.30 per lamp per year.
