

SYSPEND HMI ENCLOSURES

ALUMINUM HMI ENCLOSURES

SUPERIOR PERFORMANCE. EFFORTLESS INSTALLATION. CLEAN, MODERN AESTHETIC.

Extend the life of your entire HMI system with the new SYSPEND Aluminum HMI (Human Machine Interface) enclosure. Made with single-walled, anodized or RAL 7035 painted sections, this enclosure provides enhanced ergonomics and a fresh, modern appeal. It even cuts down on installation time with internal mounting channels for panel-less integration.

PRODUCT DETAILS:

- 23 sizes to accommodate modern flat screen HMI devices
- All sizes available in stock
- UL Type 12 rating

APPLICATIONS INCLUDE:

- Automotive
- Machine Building
- Packaging
- Oil and Gas

SUPERIOR PERFORMANCE

Light-weight, easy-to-move enclosure due to aluminum material enhancing ergonomics for operator.

Single-walled aluminum enclosure that offers superior heat dissipation properties over two-walled enclosures, where air can get trapped between the walls, acting as an insulator.

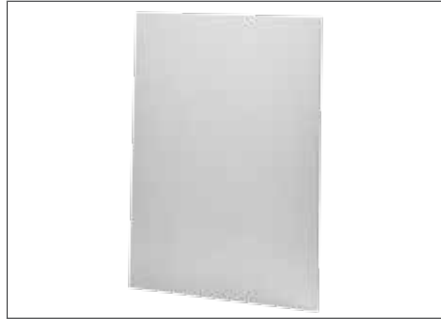

Extended life of entire HMI system, when paired with the cast aluminum support arm, due to reduced vibration while the internal components are running.

SYSPEND ALUMINUM HMI ENCLOSURE

EFFORTLESS INSTALLATION

Mounting extrusions allow customers to mount directly to the enclosure using brackets (SYMBRK), spring nuts (SYSPN), screws and/or din rail, cutting down on installation time.

Front plate is included with the enclosure, removing the hassle of purchasing it separately. This reduces the bill of materials to purchase and lets you get to work right away.

Pre-cut mounting holes (compatible with the SYSPEND 180-MAX, SYSPEND 281-MAX, Compact Series 2 and Compact Series 4 support arm systems and pedestals) eliminate the need to cut holes prior to installation, which minimizes assembly work.

CLEAN, MODERN AESTHETIC

Smooth, anodized aluminum and painted RAL 7035 offers a stylish look that pairs perfectly with Hoffman's HMI support arm systems and pedestals for modern, attractive overall aesthetics.

New sizes and configurations to choose from to match your application. The new sizes are designed specifically to accommodate modern screen designs. The hinged back plate option provides a sleek, slimmed down design while the hinged door option provides additional mounting space.

Sleek, integrated side handles give the enclosure a seamless appearance and make it easy to grip and turn the enclosure.
